

Change Settings In Your Phone or Other Mobile Device

There are many different phones and mobile devices available and it would be near impossible to list them all but these are the general instructions. If you can't figure it out please let me know.

If you are changing the settings on a mobile phone/device you will need to change the incoming and outgoing server (SMTP) to **server.jdwebhosting.com.au**.

Important: Don't make these changes until your email stops working.

1. Click **Email**
2. If you have more than one email setup select the one you want to change.
3. Go to **Settings**
4. Change the following:
 - Incoming Mail settings - **server.jdwebhosting.com.au**
 - Outgoing Mail Settings - **server.jdwebhosting.com.au**
5. Press **Done**

This is how I set it up in my phone. Most phones should be similar. If this does not work for you refer to your devices manual to change the settings as above.

If you have any problems I would be happy to help, I would just need to know what phone/device you are using.
