

# Changing your email account's settings in iPhone

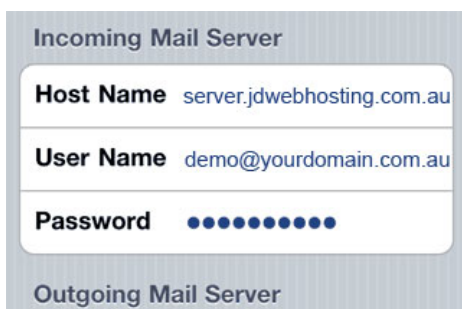

I found these instructions on the internet but have not been able to test them as I don't have an iPhone. If you have any problems please let me know.

1. Open **Settings** in your iPhone, and then select **Mail, Contacts, Calendars**.

2. Select the email account that you want to change from the **Accounts** list.

3. Find the **Incoming Mail Server** section. Enter server.jdwebhosting.com.au in the **Host Name** input field.

Find the **Outgoing Mail Server** section. Enter server.jdwebhosting.com.au in the input field.

When you're finished, click **Done** in the top-right corner. Your iPhone will then verify and save the new settings.
